

Walking Try-outs **Microplastics**

A Walking Scores Companion

Neylan Aular
University of Turku

*Every walk begins
before the first step.*

WHAT IS A SCORE?

A score is a set of conditions for practice.

It offers orientation without determining direction.

In this project, each score creates the conditions
for walking with microplastics,
while leaving open what may emerge.

HOW TO USE THE SCORES

Bring the scores into three to five walks you are already taking. For example, walking to meet a friend or going grocery shopping. Choose moments when walking with microplastics feels appropriate. These walks may unfold over approximately one month, or over a shorter period, such as two weeks, if that better fits your circumstances.

The Ground Score (page 10) accompanies every walk.

The walking scores appear between Beginning (page 12) and Afterwards (page 26). For each walk, choose one or more scores in addition to the Ground Score. They are not arranged in a sequence. You may revisit, combine, or adapt them as you go.

As they appear in this booklet, these scores remain incomplete. They continue to unfold through walking and in the traces they leave.

Read the scores before, during, and after each walk. If the walk invites it, write on them, annotate them, adapt them, or leave them unchanged. Let them become part of your walking practice.

WHY WALK WITH MICROPLASTICS?

Microplastics rarely enter
how we notice the places we walk.

This project begins from the recognition
that microplastics already participate
in the environments through which we move.

What might change
when a walk begins from that recognition?

WALKING WITH

No walk is taken alone.
Even when we walk by ourselves.

We walk with people, plants, animals,
weather, roads, dust, and materials.

Microplastics are among the materials
that accompany these walks.
Although they largely escape ordinary perception,
they are part of the environments through which we move.

The scores do not ask you to find them.
They invite you to walk from the knowledge
of their presence.

PREPARING TO WALK

Walks may take different shapes,
rhythms, and durations.

Any weather or time of day will work.

Attend to how you, the walk, and the environment
subtly change together.

Walk with care.

WHAT TO CARRY

Carry only what feels useful.

If something remains with you,
you may wish to keep a note of it.

Nothing else is required.

RETURNING

Return to the same route.

Or choose another.

Each return is a different walk.

GROUND SCORE

Microplastics

The presence of microplastics across living beings, materials, air, water, and soil is a documented condition of contemporary environments.

You are not asked to identify or verify where microplastics are present.

Begin from the condition that they already participate in the environments through which we move.

How this awareness shapes your walk forms part of the exploration.

*Every walk begins somewhere
already in progress.*

WALKING SCORES

Beginning

Walk where walking belongs to your day.

What is already unfolding as the walk begins?

*Every beginning
enters a world already in motion.*

Pace

Notice when your pace changes and why.

The environment also sets the pace.

Breath

Notice your breathing.

When does it change?

What changed with it?

The walk also enters your breath.

Remaining

Remain somewhere
slightly longer
than you intended.

What continues?

*Sometimes remaining
is another way of moving.*

Interruption

If something interrupts your walk,
stay or follow.

Do not hurry to continue.

Remain with the interruption
for as long as it asks.

What becomes possible here?

Some interruptions become part of the walk.

Return

Return if the walk invites it.

Follow the same path back.

Not to compare.

To notice what has changed.

What returns with you?

Returning is never repetition.

Weather

Walk with today's weather.

Let it change the walk.

Weather also walks.

Afterwards

Some walks continue after they end.

Let them.

Some walks arrive later.

TRACES

If traces emerge,
let them take whatever form they need.

A trace might be

- a photograph,
- a video,
- a sound recording,
- a drawing,
- a letter,
- a map,
- a movement,
- a few words,
- or something else entirely.

They do not need to explain.
They do not need to prove.

*While these walks are taken separately,
they become part of something shared.*

CORRESPONDENCE

Walking continues through correspondence.

The following page offers one way to remain in relation to what the walk has set in motion. Feel free to add, omit, or adapt anything as it becomes appropriate.

Your response may be brief or extensive.

Every response is welcome,
in whatever form it comes into being.

CORRESPONDENCE

You may use this page to accompany your correspondence after each walk.

CORRESPONDENCE

If you wish, you may also tell me:

What led you to this walk today?

Why did you choose this place?

Was there a walking score you found
yourself returning to?

These are entirely optional.

neylan.aular@utu.fi

*These scores are unfinished.
They become complete only through walking.*

Thank you for walking.

Not every page asks you to do something.
